*What we do today
will determine what
the world looks like
tomorrow.*

Marie von Ebner-Eschenbach

”

More than five trillion pieces of plastic are already floating around in our oceans.

”

Our Mission:

*We want to recycle
global plastic up to
100% and counteract
global warming.*

Wilken 
Plastikrecycling

Bernhard Wilken (grandfather of the current shareholder) takes over the farm

1930

Entry into the „Höfer-Rolle“ through Heinrich Wilken

2020

*Ecological.
Regenerative.
Sustainable.*

We live the cycle of material plastic recycling at our location in Haren (Ems).

*Waste?
For us a raw material!*

GRIST AND REGRANULATES FOR THE PRODUCTION

We offer a complete process of plastic recycling and produce in a **resource-saving** way for the material splint.
It is important to us to subject the grist to a **higher degree of purity** and color sorting during production.

High-quality raw materials made from recycled material

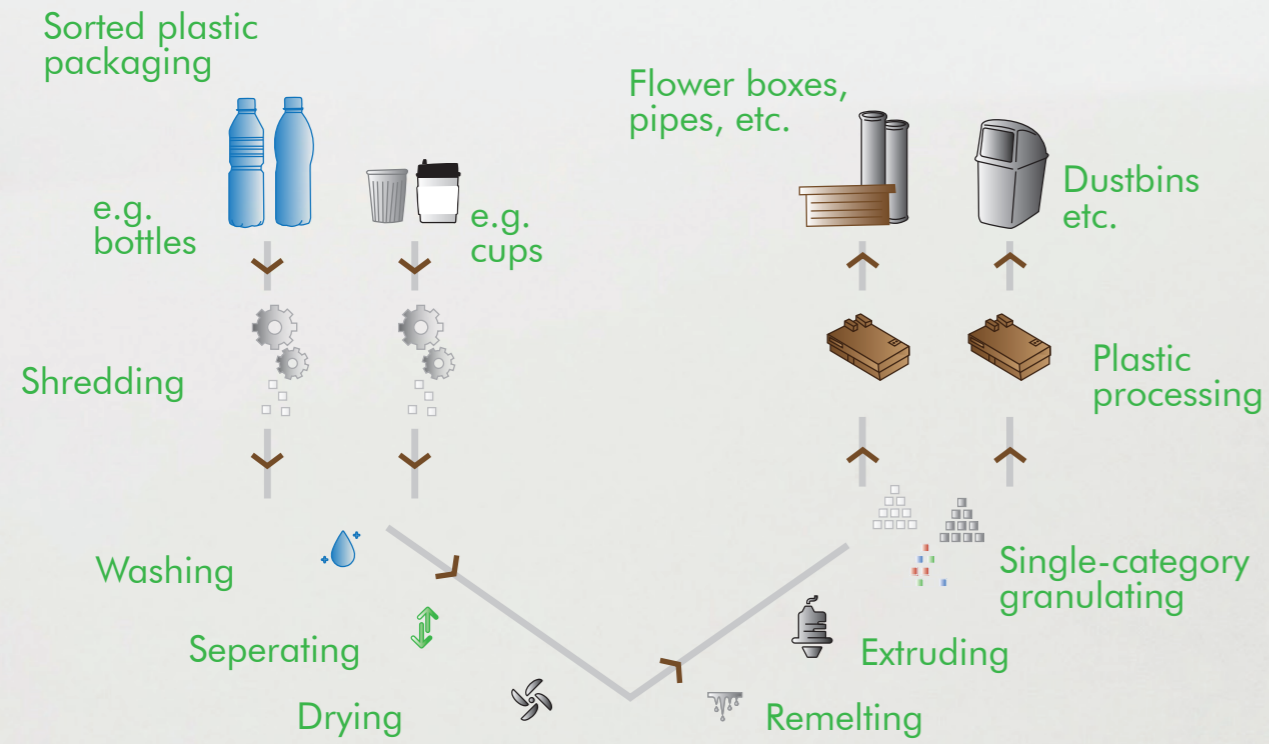

We will supply you with individually manufactured grist in various grain sizes as well as customer-specific regranulates. Produced sustainably and in an environmentally friendly manner. Of best quality and awarded the "Blue Angel" seal.

Cycle of material plastic recycling

The big picture at a glance – everything is connected.

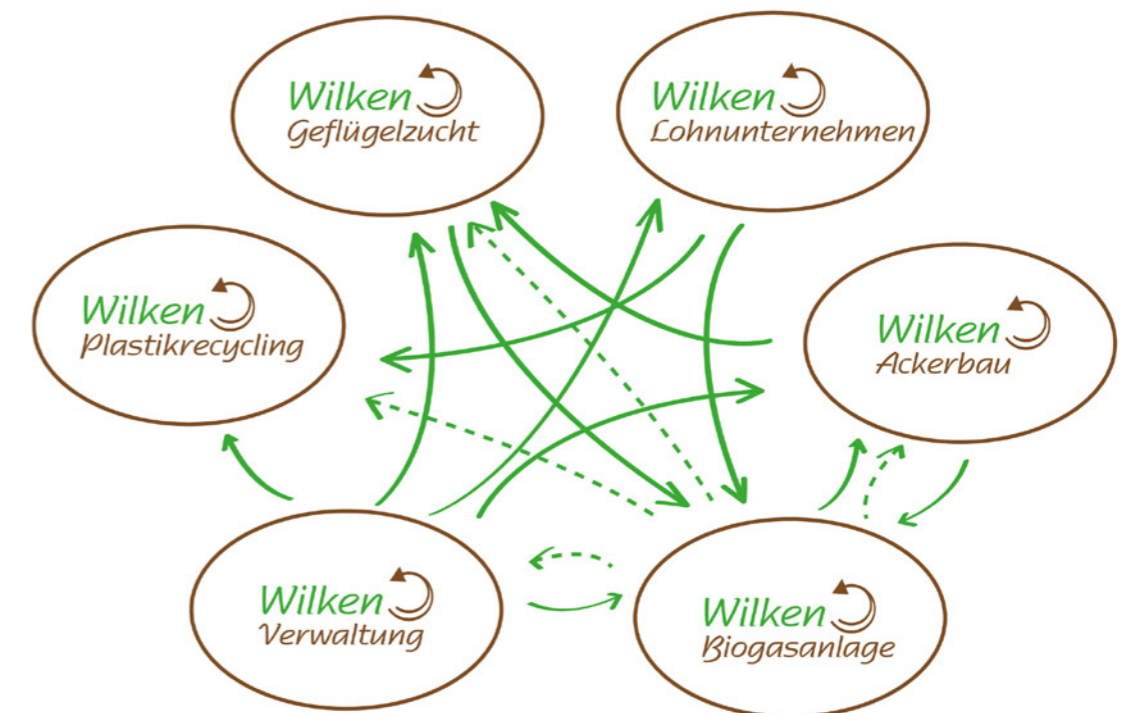

The Wilken Group is a **family-owned company** that acts regeneratively and is currently experiencing strong growth. Our corporate concept always keeps in mind the cycle of people, the environment and the economy.

Together, the company's six different lines of business form a symbiosis. What is special about this is that the different areas of the Group are closely interlinked so that the entire network can support itself.

„Self-sufficiency without the unnecessary use of external resources.“

In addition to **agriculture** and **poultry farming**, our company operates a **biogas plant** and is involved in the **agricultural contractor** sector. **Administration** and our **plastic recycling facility** complete the Group.
